# Overview

## Our story

---

The product got its start as a 3D printable screw-together dice tower. It soon became clear that Modi Boxi could be so much more. The 3D print screws were replaced with the Modi Bolt system, and Modi Boxi was born as a 3D printable storage solution for gamers.

## Our design philosophy

---

Design a gaming storage system that makes you want to play with it as much as the items you put in it.

---

Modi Boxi is based on three rules:

- **Fully 3D printable** - no additional parts or pieces required, including the fasteners.
- **No glue** - everything should work off the print bed.
- **No supports** - everything oriented to print efficiently, saving material and time.

## Modi Boxi math

---

When assembling Modi Boxi, remember these key rules:

- Every box is made of levels (each Modi Hole defines a level).
- Each level is 30mm tall.
- Layers are the internal size of the Boxis and are used to stack trays vertically.
- A Layer 1 internal tray is 25mm. Every layer above that is 30mm.
- Internal trays are organized in thirds horizontally.

# How to use the Modi Bolt system (patent pending)

## Step 1

Align the hole in the arm with a hole in a Boxi.

## Step 2

1. Push the Modi Bolt into the arm hole and align it with the hole in the Boxi.
2. Push the Modi Lock halfway into the Bolt.

## Step 3

Twist the Modi Bolt until it stops.

## Step 4

Push in the Modi Lock until it is flush.

# How do the Modi Holes work?

## About Modi Holes

The Modi Holes are designed to work with the Modi Bolt. This is how you attach things to the Modi Boxis. Each Hole is placed to maximize its utility with the Modi Boxi system.

# How to use the Modi Arms

## About the arms

Each Boxi width and height has its own set of arms to connect to the Boxi below it. For example, there are medium Boxi arms for level 01, 02, 03.

## Types of arms

**Stack arms:** To stack your Boxis, you need 4 arms for your top Boxi size and level. For example, if your top Boxi is a medium level 02, you will use 4 of stack arm M\_02.

*Use the first and third holes to connect the stacking arms*

**Flat arms:** To make the Boxi lay flat, you will need 2 flat arms that are for the top Boxi size and level. For example, if your top Boxi is a medium level 02, you will use a flat arm M\_02f.

*Use the 1 and 4th holes to connect the flat arms.*

# How to use Modi Drawers

## What to print

The Drawer insert Boxi is setup like a DIY tray. You can configure the insert box to be one big drawer or have a bunch of small compartments using the different size **walls**.

## What to print

To make a full drawer, you need to print both

1. M\_LVL02\_Drawer\_Boxi
2. M\_LVL02\_Drawer\_insert\_Boxi

## Hold your drawers closed

To hold your drawer in place, you can use a long lock hook or a corner hook.

# How to use Modi Lids

## Flip Lid

The Flip Lid stays attached to your Boxi at all times. It opens and closes and can be latched down with a set of corner hooks (*not shown*).

## Latch Lid

The Latch Lid can simply slide off your Boxi. You can attach a handle to it so you can carry your Boxi. The latch also works with the Modi Cage system.

# How to use Modi Rails for minis

Modi Rails lets you slide your minis into place and keep them there. By using two Modi Rail hold downs, you can slip your minis into place. The hold downs come in two heights and four widths.

youtube: [Modi Boxi: Modi Rails](#)

Hold down configurations for each Boxi layer:

- Layer 01 = Lyr01
- Layer 02 = Back
- Layer 03 = Back + Front
- Layer 04 = Back + 2x Front
- Layer 04 = Back + 3x Front

# How to use Modi DIY trays

The DIY trays let you configure a versatile tray any way you want. You can make a layout of compartments to meet your needs and hold a variety of small or medium-sized parts and pieces. This is done by utilizing various sizes of walls and ribs.

Example configuration

# How to use Modi Cage

## What you need to know:

- 1 Boxi will serve as your base. This can be a Level 02 or higher.
- To know what size Cage sides to print, you need to add up all the levels you want to stack above the base Boxi and print the Cage sides for that amount.  
*Example: Cage\_LVL05.stl is needed for the example shown.*
- When attaching the Cage side, keep the matching sides on the same sides of the Boxis. You will need to turn half of them upside down to make this happen.

## Build list for just the cage:

- 4X Bolt\_1.stl
- 4X Bolt\_2.stl
- 4x Cage sides
- 1x Latch Lid setup (see page 12)

# Stretch Goals

The DIY Dice Tower lets you make your dice tower your way. You can stack the center to have a dice tower as tall as you want! Watch the video and see it in action.

## Boxi Mount!

It is time to think outside of the Boxi. Watch the video to see it in action.

## Outer-Tubes

For easy access to brushes, pens, X-Acto blades, paints, or whatever else you fancy.

# Stretch Goals

## Boxi Carrier

Use it to carry books, rulers, anything larger than a boxi

For printers that have a bed size of 210 x 210mm x 230

## Free Size Gauges

## Extra Strength Modi Bolt

The Modi Bolt is strong but some filament could use some extra help. This Extra Strength bolt prints on its side so the layer lines give it more strength.
